by Schneider Electric

ID and IDE Series Network Fixed Dome Cameras

Sarix™ Technology

C2961M (10/09)

Product Overview

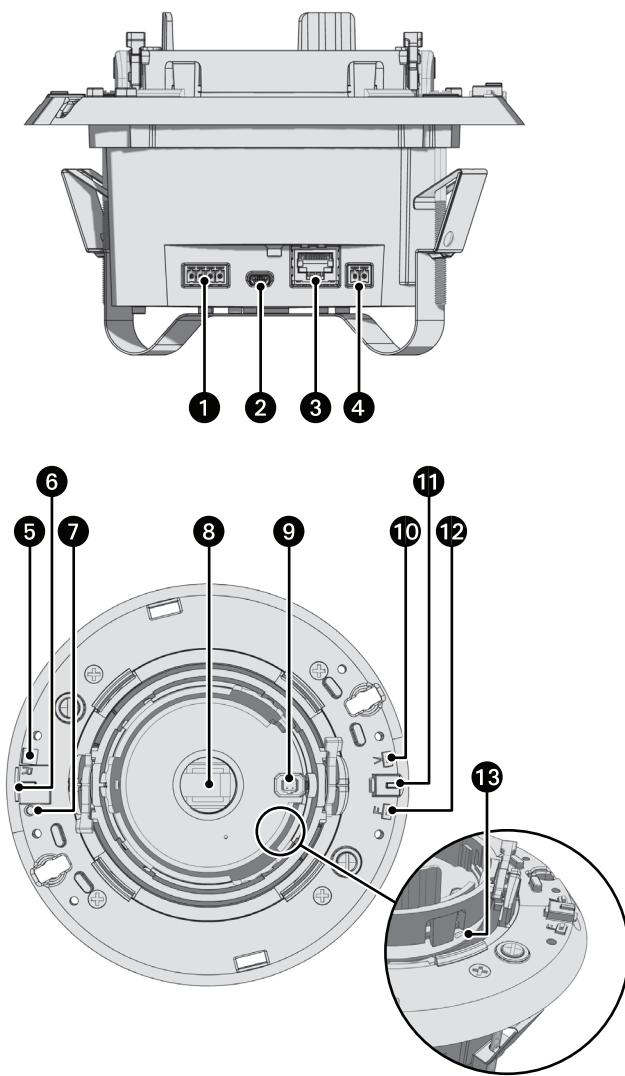

Figure 1. Camera Connections and Features

- 1 Relay and Alarm Connections:** One relay that can be used to control an external circuit, and one alarm for physical input into the system.
- 2 Accessory Port:** For use with compatible Pelco accessories.
- 3 RJ-45 Network Port:** Connects the camera to the IP network. Also supplies power to the camera through the network using Power over Ethernet (PoE). If PoE is not available, the camera is prewired for 24 VAC.
- 4 24 VAC Power Connections:** Supports 24 VAC as the power source if PoE is not used.
- 5 Reset Button:** Reboots the camera or restores the camera's factory default settings. This button is recessed. Using a small tool, such as a paper clip, press and release the reset button once to reboot the camera. Press and hold the reset button for 10 seconds to restore the camera to the factory default settings.
- 6 Micro SD Card Slot:** Saves a snapshot image to a micro SD card based on alarm activity.
- 7 Power LED:** Glows solid amber and then glows solid green during and after the configuration sequence. The LED can be disabled through the user interface. If this LED glows red (solid or flashing), contact Pelco Product Support at 1-800-289-9100 (USA and Canada) or +1-559-292-1981 (international) for assistance.
- 8 Lens Mount:** Fits a standard CS-mount lens. Use a megapixel lens with the ID Series and IDE Series megapixel cameras. A standard definition lens installed on a megapixel camera will limit the resolution of the camera and create poor image quality.
- 9 Auto Iris Lens Connector:** Controls the auto iris lens. Insert the 4-pin connector from the DC drive auto iris lens into this connector.
- 10 NTSC/PAL Button:** Toggles the service port between NTSC and PAL formats. The default setting is NTSC.
- 11 Service Port:** Outputs analog video. Use this port at the installation site to set up the field of view and to focus the camera. When a service cable is connected to the camera, video to the IP stream is disabled.
- 12 Auto Back Focus Button:** Sets the auto back focus mechanism. Press once to center the auto back focus mechanism and to fully open the iris. Press and hold the button for three seconds to start the auto back focus mechanism and focus the camera.
- 13 Ethernet Activity/Link LED:** Flashes green to indicate that data is being transmitted or received by the camera. Glows solid amber to indicate that a live network connection is established.

NOTES:

- Pelco recommends connecting the camera to a network that uses a Dynamic Host Configuration Protocol (DHCP) server to address devices.
- Do not use a hub in the network setup of the camera.
- To secure access to the IP camera, place the camera behind a firewall when it is connected to a network.

Installation

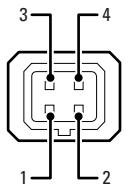

BACK BOX AND LENS

For detailed instructions, refer to the ID Series Installation/Operation manual or the IDE Series Installation/Operation manual. Both are available on the resource disc.

! WARNING: Remove the foam insert from the back box before installing the system. The foam insert secures the tilt ring to prevent damage to the optical chassis during shipment.

NOTE: Megapixel lenses are designed and tested to deliver optimal image quality to megapixel cameras. A standard definition lens installed on a megapixel camera will limit the resolution of the camera and create poor image quality.

1. Prepare the mounting surface using one of the following options:
 - In-Ceiling Installation
 - (1) Cut a 6-inch diameter hole in the ceiling.
 - (2) Pull all wiring through the hole and terminate all wires (if not already terminated).
 - Surface Installation
 - (1) Using the surface mount ring as a template, drill the holes for the mounting hardware.
 - (2) Drill a hole in the ceiling for the wiring.
 - (3) Pull all wiring through the hole and terminate all wires (if not already terminated).
 - (4) Attach the surface mount ring to the mounting surface.
2. Install the lens:
 - a. Remove the cover from the lens mount.
 - b. Screw the lens onto the lens mount. Be careful to prevent dust from entering the space between the lens and the imager. If necessary, use clean, compressed air to remove any foreign matter (refer to the instructions shipped with the lens).
 - c. Connect the auto iris lens to the 4-pin connector located on the side of the camera. Refer to Figure 2 for pin connections and iris drive connector information.

Pin	DC (AID) Auto Iris Lens
1	Control coil negative (-)
2	Control coil positive (+)
3	Drive coil positive (+)
4	Drive coil negative (-)

Figure 2. Lens Pin Connections

3. Plug the network cable into the RJ-45 network port on the side of the back box. If the network has no PoE, connect a 24 VAC Class 2 power supply to the 24 VAC power connector.

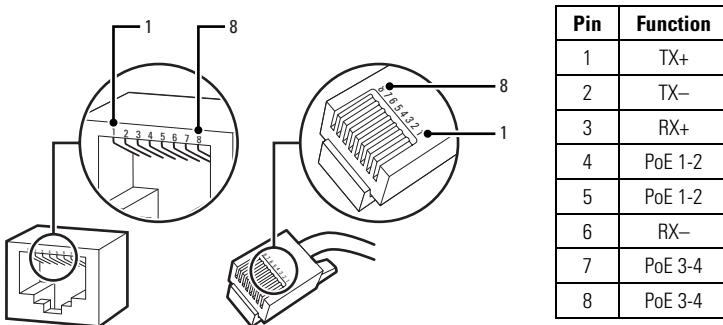

Figure 3. RJ-45 Pin Descriptions

4. Connect the necessary wiring for alarms and relays (refer to Figure 4). Only use the 24 VAC wires if PoE is not available.

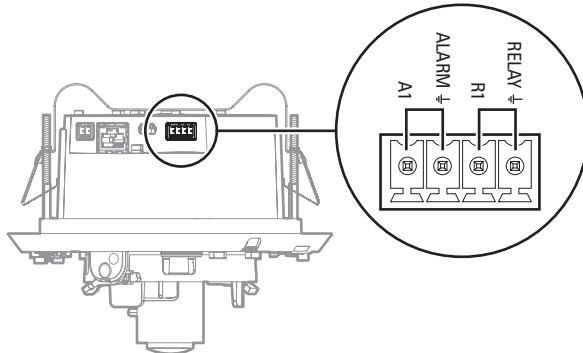

Figure 4. Alarm and Relay Wiring

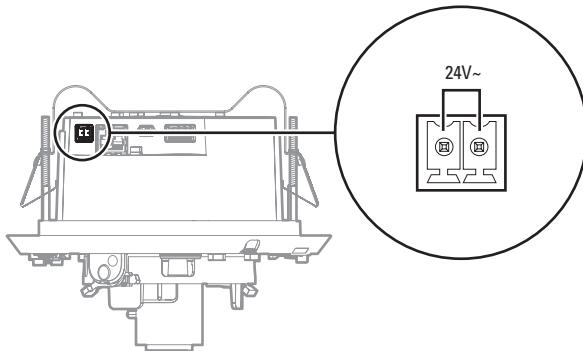

Figure 5. 24 VAC Wiring

5. Install the back box using one of the following options:

- In-Ceiling Installation
 - (1) Install the back box by compressing the spring clips and pushing the back box through the hole (refer to Figure 6).
 - (2) Tighten the machine screws completely to secure the back box to the ceiling.

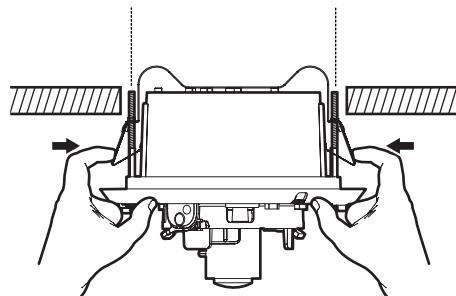

Figure 6. In-Ceiling Installation

- Surface Installation

- (1) Install the back box in the surface mount ring by compressing the spring clips and pushing the back box through the hole (refer to Figure 7).
 - (2) Tighten the machine screws completely to secure the back box to the ceiling.

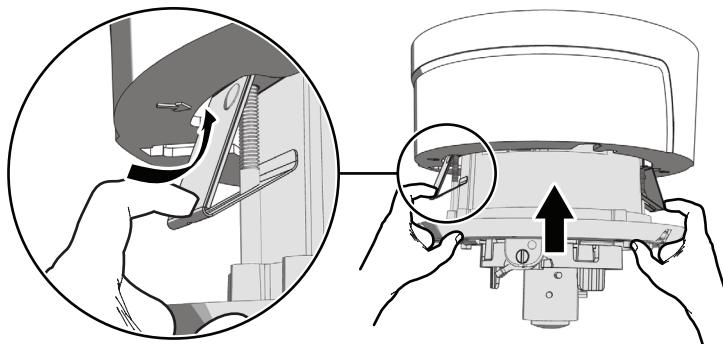

Figure 7. Surface Installation

6. Apply power to the camera. The camera will complete a configuration sequence: the green LED flashes five times per second for approximately two minutes and then turns solid after the sequence is complete.

NOTE: If the camera is not connected to a DHCP server and DHCP is enabled, the configuration sequence might take up to five minutes to complete.

7. Position the camera
 - a. View the camera image using the service port or a Web browser.
 - b. Unlock the tab locks located on each side of the camera.
 - c. Manually rotate and tilt the camera module to position the camera. Do not over-rotate the module.
 - d. Lock the tab locks to secure the camera.

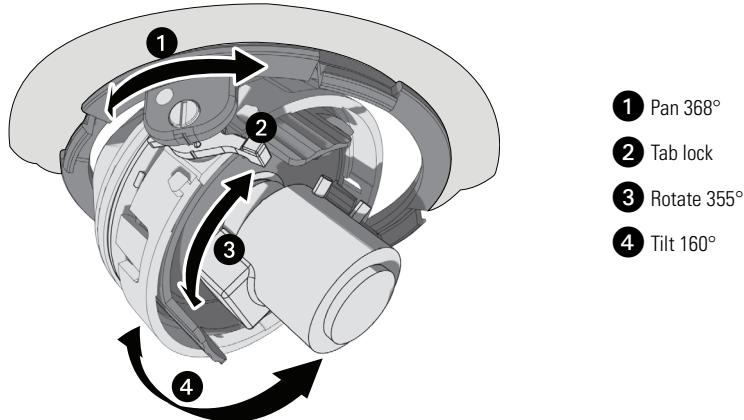

Figure 8. Positioning the Camera

8. Focus the lens:
 - a. View the camera image using the service port or a Web browser.
 - b. Press the auto back focus button, located on the rim of the back box, once to center the focus mechanism.
 - c. Manually adjust the zoom and focus of the lens to the desired field of view (refer to the instructions shipped with the lens).
 - d. Press and hold the back focus button for three seconds to start the auto back focus mechanism.

DOME LINER AND LOWER DOME

1. Align the magnets on the dome liner with the magnets located on the back box (refer to Figure 9).

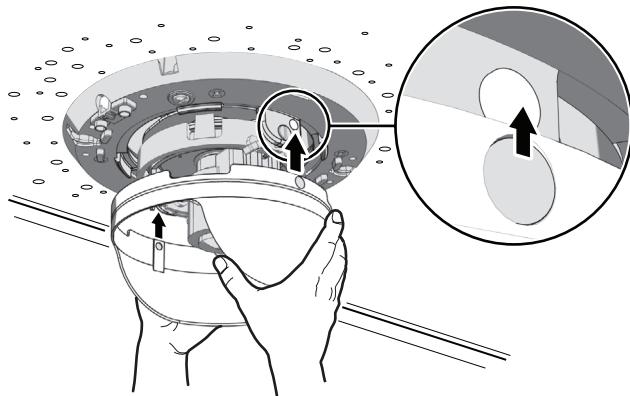

Figure 9. Installing the Dome Liner

2. Attach the lower dome leash to the back box (refer to Figure 10).

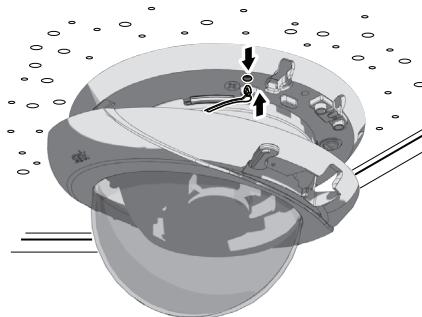

Figure 10. Attaching the Leash

3. Move the lower dome latches away from the bubble until you hear a click. Align the lower dome latches with the slots located on the back box (refer to Figure 11).

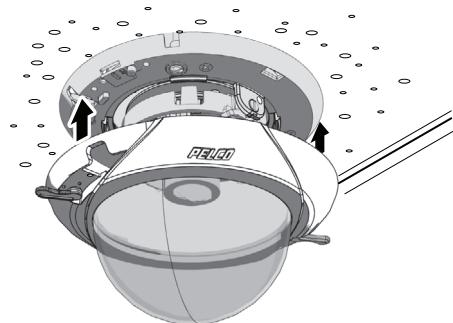

Figure 11. Aligning the Lower Dome with the Back Box

4. Snap the lower dome into place, and then move the lower dome latches towards the bubble until you hear a click (refer to Figure 12).

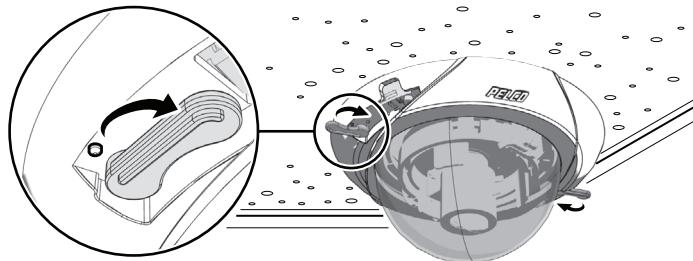

Figure 12. Locking the Lower Dome

5. Turn the top cover of the lower dome 90-degrees to conceal the dome latches, LED, and service port (refer to Figure 13).

Figure 13. Positioning the Top Cover of the Lower Dome

Operation

Once the camera is installed, apply power to the camera. The camera will start a configuration sequence: the green LED flashes five times per second for approximately two minutes, and then turns solid after the boot cycle is complete and the camera is on line.

IP ADDRESS SETTINGS

If the camera is connected to a Dynamic Host Configuration Protocol (DHCP) network and DHCP is set to the On position, the server will automatically assign an IP address to the device; DHCP On is the default setting for the camera. Set DHCP to the Off position to manually set the camera's IP address.

NOTES:

- If the camera is not connected to a DHCP server but DHCP is set to On, the default IP address 192.168.0.20 on subnet mask 255.255.255.0 is automatically assigned to the camera. After the first camera is connected and assigned the default IP address, the system will automatically look for other cameras on the auto IP address system and assign IP addresses in sequential order as required. For example if three cameras are connected to a network without a DHCP server, the first camera will be assigned address 192.168.0.20, the second camera address 192.168.0.21, and the third camera address 192.168.0.22.
- Contact your network administrator to avoid network conflicts before setting or changing the camera's IP address.
- If you do not know the camera's IP address, install the Pelco Device Utility software available on the resource disc shipped with the product. The utility will locate the assigned name, IP address, and MAC address for devices connected to the same virtual local area network (VLAN) as your computer. The Device Utility software is also available at www.pelco.com/software/downloads/.

MINIMUM SYSTEM REQUIREMENTS

ID SERIES

Processor: Intel® Pentium® 4 microprocessor, 1.6 GHz

Operating System: Microsoft® Windows® XP, Windows Vista®, or Mac® OS X 10.4 (or later)

Memory: 512 MB RAM

Network Interface Card: 100 megabits (or greater)

Monitor: Minimum of 1024 x 768 resolution, 16- or 32-bit pixel color resolution

Web Browser: Internet Explorer® 7.0 (or later) or Mozilla® Firefox® 3.0 (or later)

NOTE: Internet Explorer is not supported by Mac OS X 10.4.

Media Player: QuickTime® 7.55

NOTE: This product is not compatible with QuickTime version 7.6.4. If you have this version installed on your system, uninstall it and then install QuickTime version 7.5.5, which is available on the resource disc shipped with the product.

IDE SERIES

Processor: Intel Core™ 2 Duo microprocessor, 2.6 GHz

Operating System: Windows XP, Windows Vista, or Mac OS X 10.4 (or later)

Memory: 2 GB RAM

Network Interface Card: 100 megabits (or greater)

Monitor: Minimum of 1024 x 768 resolution, 16- or 32-bit pixel color resolution

Web Browser: Internet Explorer® 7.0 (or later) or Mozilla® Firefox® 3.0 (or later)

NOTE: Internet Explorer is not supported by Mac OS X 10.4.

Media Player: QuickTime® 7.55

NOTE: This product is not compatible with QuickTime version 7.6.4. If you have this version installed on your system, uninstall it and then install QuickTime version 7.5.5, which is available on the resource disc shipped with the product.

LOGGING ON TO THE CAMERA

1. Open the Web browser.
2. Type the camera's IP address in the browser address bar.

NOTE: If you do not know the camera's IP address, you can locate it using the Pelco Device Utility software.

3. Click the Login button in the navigation bar; a dialog box appears.
4. Type your user ID and password; **admin** is the default for both.

NOTE: If you are logging on to the camera as the administrator for the first time, the default User ID and Password are admin (all lowercase). For security purposes, be sure to change the password after you log on for the first time.

5. Click Log In.

LIVE PAGE ICONS

Viewable icons are based on group permissions.

Show Device List: Displays a list of viewable cameras connected to the same virtual local area network (VLAN) as the camera to which you are logged on.

Disable Viewer: Closes the live view window.

1 x 1 Mode: Displays a single video pane.

2 x 2 Mode: Displays 4 video panes in rows of two.

3 x 3 Mode: Displays 9 video panes in rows of three.

4 x 4 Mode: Displays 16 video panes in rows of four.

Select Stream: Selects the viewable video stream (primary or secondary) and selects unicast or multicast settings.

Maximize Viewing Area: Scales the image to the full size of the browser.

Show Toolbar: Returns the window to normal view. This option is only available after the window has been set to maximize viewing area.

Open Stream in New Window: Opens the video in a scalable, independent window. Opening the video in a separate window allows you to view the video while other applications are running. This window can be minimized, maximized, or closed using the title bar buttons of the active window. The window can also be resized option by dragging the lower-right corner of the window.

Take a Snapshot: Captures the image displayed in the video pane and saves it as a JPEG file.

SETTINGS PAGE

Depending on user permissions, the Settings page allows you to manage camera system settings, set up users and groups, and control the camera.

To access the camera settings:

1. Log on to the camera.
2. Click the Settings link in the navigation bar located in the upper-right corner of the page; a list of menu tabs appear. Place the mouse pointer over a tab to display a list of submenus.

System	Network	Imaging	A/V Streams	Users and Groups	Events
General	General	Select Video Preset	Users	Sources	
SSL	Exposure	Video Configuration	Groups	Handlers	
SSH	Focus	Audio Configuration	General Settings		
	Tone Map				
	White Balance				

Figure 14. Settings Page Menus

SYSTEM TAB

The System tab displays the firmware version, device name, enables and disables the power LED, allows setup of the day and time settings, and permits event system email setup.

NETWORK TAB

General: Displays the hardware address, hostname, DHCP settings, and IP address settings.

SSL: Secure Socket Layers (SSL) encrypts communications making it difficult for unauthorized users to intercept and view user names and passwords.

SSH: Secure Shell (SSH) allows Pelco Product Support to log on to and service the camera for advanced troubleshooting purposes.

IMAGING TAB

General: Includes camera orientation and digital processing settings. The orientation settings allow for standard or inverted installation of the camera. The digital processing settings adjust the sharpness, saturation, and contrast of the scene.

Exposure: Adjusts scene detail and contrast. A scene with correct exposure settings has adequate detail and contrast between white and dark values. An image with too little or too much exposure eliminates detail in the scene. The camera features auto and manual exposure settings.

Focus: Includes auto back focus and manual focus settings (refer to *Focus* in the ID Series Installation/Operation manual or the IDE Series Installation/Operation manual for detailed instructions). The camera will focus when changes in the scene are detected. Manual focus turns off the auto focus mechanism and locks the camera at a user-specified position. The manual focus setting is recommended only for indoor applications that have a single, unchanging primary light source. The Focus page also includes Full Range Auto-Focus, Quick Auto-Focus, and Factory Defaults.

Tone Map: Balances the brightest and darkest sections of an image to produce a picture with more balanced lighting and more detail.

White Balance: Defines how the camera processes video images to render true colors in a scene. White balance is especially effective in scenes with changing lighting conditions or in scenes with more than one type of light source.

A/V STREAMS TAB

Use the A/V Streams tab to configure the video and audio streams for the camera. The A/V Streams tab includes a Video Presets page, a Video Configuration page, and an Audio Configuration page.

Video Presets: The Video Preset page includes three fully-configured video presets, which include primary and secondary video stream settings for easy setup. These presets may also be used as a starting point for a custom video configuration. These preset configurations vary depending on camera model.

Video Configuration: The Video Configuration page allows you to customize the compression, resolution, image rate, and bit rate of the video streams. The default names for the streams are Primary Stream and Secondary Stream. Although each stream can be configured independently, the settings of one stream can limit the options available to the other stream, depending on the processing power used.

NOTE: Always configure the primary stream before the secondary stream. The primary stream should always be the most resource-intensive of the streams.

Audio Configuration: The Audio Configuration page allows you to setup the internal audio device or an external audio device. The default setting for Audio is disabled, which means that no audio is transmitted from the camera. When enabled, audio is transmitted from the camera to the PC. Based on your system configuration, images and audio may not be synchronized.

NOTES:

- Improper use of audio/visual recording equipment may subject you to civil and criminal penalties. Applicable laws regarding the use of such capabilities vary between jurisdictions and may require, among other things, express written consent from the recorded subjects. You are solely responsible for insuring strict compliance with such laws and for strict adherence to any/all rights of privacy and personality.
- Not all camera models are equipped with an internal audio device. Refer to the specifications for your camera model for information.

USERS AND GROUPS TAB

Users: Defines the permissions assigned to individuals logged on to the camera. Use this feature to create, modify, or delete user accounts.

NOTE: The only defined user that cannot be deleted is admin; however, the administrator password can be changed. For security purposes, it is important that you change your password after you log on to the device for the first time.

Groups: Defines the permissions assigned to users within a group. Use this setting to create, modify, and delete groups and permissions. Multiple permissions can be assigned to each group.

General Settings: Changes the way the camera manages the users and groups settings. These settings can be managed on a camera-to-camera basis or by using a centralized server to apply changes to multiple cameras.

EVENTS TAB

Sources: Defines the camera functions that are automatically triggered by an event source. The camera supports alarm, system, and timer event sources.

Handlers: Defines the actions that a camera takes when an event occurs. The camera supports four event handlers: Send Email, Write JPEG to SD Card, Upload JPEG to FTP Server, and Open/Close Relay.

PRODUCT WARRANTY AND RETURN INFORMATION

WARRANTY

Pelco will repair or replace, without charge, any merchandise proved defective in material or workmanship **for a period of one year** after the date of shipment.

Exceptions to this warranty are as noted below:

- Five years:
 - Fiber optic products
 - TW3000 Series unshielded twisted pair (UTP) transmission products
 - CC3701H-2, CC3701H-2X, CC3751H-2, CC3651H-2X, MC3651H-2, and MC3651H-2X camera models
- Three years:
 - Pelco-designed fixed network cameras and network dome cameras with Sarix™ technology
 - Pelco-branded fixed camera models (CCC1390H Series, C10DN Series, C10CH Series, and IP3701H Series)
 - EH1500 Series enclosures
 - Spectra® IV products (including Spectra IV IP)
 - Camclosure® Series (IS, ICS, IP) integrated camera systems
 - DX Series digital video recorders, DVR5100 Series digital video recorders, Digital Sentry® Series hardware products, DVX Series digital video recorders, and NVR300 Series network video recorders
 - Endura® Series distributed network-based video products
 - Genex® Series products (multiplexers, server, and keyboard)
 - PMCL200/300/400 Series LCD monitors
- Two years:
 - Standard varifocal, fixed focal, and motorized zoom lenses.
 - DF5/DF8 Series fixed dome products
 - Legacy® Series integrated positioning systems
 - Spectra III™, Spectra Mini, Spectra Mini IP, Esprit®, ExSite®, and PS20 scanners, including when used in continuous motion applications.
 - Esprit Ti and T12500 Series thermal imaging products
 - Esprit and WW5700 Series window wiper (excluding wiper blades).
 - CMG700/CMG800/CM9700 Series matrix
 - Digital Light Processing (DLP®) displays (except lamp and color wheel). The lamp and color wheel will be covered for a period of 90 days. The air filter is not covered under warranty.
 - Intelli-M® eLCD controllers
 - PMCL542F, PMCL547F, and PMCL552F FHD monitors
- One year:
 - Video cassette recorders (VCRs), except video heads. Video heads will be covered for a period of six months.
- Six months:
 - All pan and tilts, scanners, or preset lenses used in continuous motion applications (preset scan, tour, and auto scan modes).

Pelco will warrant all replacement parts and repairs for 90 days from the date of Pelco shipment. All goods requiring warranty repair shall be sent freight prepaid to a Pelco designated location. Repairs made necessary by reason of misuse, alteration, normal wear, or accident are not covered under this warranty.

Pelco assumes no risk and shall be subject to no liability for damages or loss resulting from the specific use or application made of the Products. Pelco's liability for any claim, whether based on breach of contract, negligence, infringement of any rights of any party or product liability, relating to the Products shall not exceed the price paid by the Dealer to Pelco for such Products. In no event will Pelco be liable for any special, incidental, or consequential damages (including loss of use, loss of profit, and claims of third parties) however caused, whether by the negligence of Pelco or otherwise.

The above warranty provides the Dealer with specific legal rights. The Dealer may also have additional rights, which are subject to variation from state to state.

If a warranty repair is required, the Dealer must contact Pelco at (800) 289-9100 or (559) 292-1981 to obtain a Repair Authorization number (RA), and provide the following information:

1. Model and serial number
2. Date of shipment, P.O. number, sales order number, or Pelco invoice number
3. Details of the defect or problem

If there is a dispute regarding the warranty of a product that does not fall under the warranty conditions stated above, please include a written explanation with the product when returned.

Method of return shipment shall be the same or equal to the method by which the item was received by Pelco.

RETURNS

To expedite parts returned for repair or credit, please call Pelco at (800) 289-9100 or (559) 292-1981 to obtain an authorization number (CA number if returned for credit, and RA number if returned for repair) and designated return location.

All merchandise returned for credit may be subject to a 20 percent restocking and refurbishing charge.

Goods returned for repair or credit should be clearly identified with the assigned CA or RA number and freight should be prepaid
